

SOME MACROASPECTS OF FDI IN ROMANIA

*Author**:
Gheorghe ZAMAN

Abstract.

The paper studies the macroeconomic aspects and influence of FDI on banking sector, foreign external debt on medium and long term, labour market and relevant macro indicators of economic growth. The main conclusion is that the comparison of FDI advantages and disadvantages presupposes a complex methodological approach, particularised on types of activities and effects. The corroboration at local, regional and national levels of favourable and unfavourable effects, as a rule, leads to a net favourable result, yet without eliminating also the existence of some non favourable punctual results.

Key words: FDI effects, banking sector, foreign external debt, labour market.

Jel Classification: F21
