Emilian M. DOBRESCU

Abstract

The purpose of the study is to demonstrate that the reference rate influences significantly the economic evolution of a country or some large areas on which that currency circulates; we mean euro and US dollar. The monetary policy regarding the reference rate influences clearly the economic policies, and not the other way round. The banking policies regarding the reference rate influence clearly the economic-financial activity of the area in which that currency circulates.

Key words: FDI, integration, monetary policy

Jel Classification: F21, E52.
